Glory (U.S.A.) Inc. Unveils New Technology Release to Enhance Its Portfolio of Cash Recyclers

Glory's new intelligent cash recycler brings the latest in cash management technology to the retail industry.

WEST CALDWELL, NJ, – September 13, 2011 – Glory (U.S.A.) Inc., www.gloryusa.com, the leader in cash management solutions announced today it has launched a new cash recycler incorporating Glory's new intelligent cash management technology. The RBG-300 is designed to be installed in back offices of retail stores and connected online to the financial institutions network to process deposits and dispense notes for change funds.

Using its rich history of innovation and expertise in the placement of over 100,000 cash recyclers worldwide, Glory creates the true next generation of cash recyclers that incorporate intelligent systems for the daily management of cash inventory in banks, financial institutions and retail environments.

This intelligent recycler technology establishes the new benchmark for cash recyclers by providing these key benefits:

- **The Largest Capacity of Recyclable Notes in the Industry**
Approximately 10,000 recyclable notes capacity and a secure 4,500 note collection drawer provides for fewer change orders and armored pickups. Ideal for high volume retail cash room operations.
- **Immediate Cash Funds Availability**
Glory's new innovative cash room management software manages cash, coin and all media in a single location saving processing time. Funds can also be credited once a day from the collection drawer or real time from the unit contents with the use of wireless or TCP/IP connectivity.
- **Cassettes for Efficient Handling of Cash Inventory**
The recycler processes cash in ATM like cassettes creating access to immediate funds, minimizing timely bank visits or costly armored change order deliveries.
- **Internal Auto Verification**
Notes are automatically verified at various intervals and then compared to the database eliminating risk and exposure.
- **Enhanced Security**
The approved UL-291 safe allows for overnight storage of cash inventory. No need to remove cash to an external vault.

"As the leader in development and manufacturing of quality cash handling equipment, our new technology allows us to again establish the benchmark. With over 60 years of developing cash management solutions we listen to our customers and deliver solutions that meet their changing business needs", said Rick Friese, SVP Sales and Marketing for Glory (U.S.A.) Inc.

"We introduced our first cash recycler in 1983. With the development of our new intelligent recycler technology we are now in production of our 7th generation recycler product that produces increased efficiency of cash funds management, greater reduction in operating costs, and increased security and capacity, reinforcing Glory's leadership in cash management solutions," said Friese.

Glory's reliable solutions can be found in 27 of the top 50 US Banks and over half of the top 50 US Credit Unions. To learn more about the exciting new RBG-300 intelligent cash recycler and how Glory can help meet cash management challenges of today please visit us at www.gloryusa.com
